Homework 3: REACT

Our application was portfolio. We have made the same application in this homework.

Few Exceptions:

1) We were not able to store the portfolios as database wasn't involved. So you can just create a portfolio and it will be stored on the same page. You can edit or remove it.

2) No picture was used in portfolio.

Homework Requirements:

React Router Dom is used for routing in the homework.

1) Browser Router is used in App.js file and routes has been assigned.
2) Conditional Routing has been used in login.jsx file.
3) Use Props are used as mentioned if a user is on the Login page the above Login Link must be highlighted to show that the user is currently on Login Page.
4) The application has a contact form page with data validation.
5) useNavigate has been used one time in the project in login.jsx.
6) Reusability of code and components is done for eg. Header.

To run the code you need to generate node module.
